```csharp
1  namespace Delegado6
2  {
3      internal class Program
4      {
5          static void Main(string[] args)
6          {
7              Classroom c1 = new Classroom();
8              c1.CreateList();
9
10             c1.DisplayNames();
11
12             List<string> list = new List<string>();
13             list = c1.Filter((student) =>
14             {
15                 if (student.Name == "Sarah")
16                     return true;
17                 return false;
18             });
19
20             foreach(string s in list)
21             {
22                 Console.WriteLine(s);
23             }
24         }
25     }
26 }
27
```
